EDUCATION

Bachelor of Technology in Computer Science and Engineering

2025 – Present

Indira Gandhi Delhi Technical University for Women, Delhi

CGPA: 9.434

ALGORITHMIC ENGINEERING AND COMPETITIVE PROGRAMMING

- Solved **200+** **algorithmic problems** across Codeforces, LeetCode, GeeksforGeeks, and TUF, covering arrays, strings, recursion, hashing, linked lists, stacks,heaps,trees and graphs.
- Actively benchmarked solution performance and tracked rating progression using Codolio analytics.

EXPERIENCE

Generative AI and Prompt Engineering Intern

June 2025 – July 2025

IGDTUW — In collaboration with Sansoftech — [View Certification](#)

- Engineered **EduGenie**, an end-to-end AI PDF learning system, processing **100% heterogeneous PDF layouts** using PyPDF2 and PyMuPDF.
- Designed a **1024 token chunking pipeline** to ensure lossless document coverage for PDFs exceeding 200+ pages.
- Integrated LLMs using Groq and OpenAI APIs to generate **summaries, flashcards, quizzes, and contextual Q/A**, producing structured outputs with consistent formatting and reduced inference reload latency by **40%** through Streamlit resource caching and optimized model initialization.

PROJECTS

EduGenie — AI PDF Learning Assistant

Technologies: Python, Streamlit, PyPDF2, PyMuPDF, Hugging Face, REST APIs, LLMs

- Architected backend pipelines for PDF parsing, flashcard synthesis, quiz generation, and conversational retrieval over document context.
- Achieved sub-second response times for cached inference paths during repeated document queries.

Smart Air Quality Monitoring System

Technologies: Arduino, ESP8266, ThingSpeak API, HTML, CSS, JavaScript

- Built an IoT system streaming **3 environmental parameters every 15 seconds** to a cloud REST endpoint.
- Maintained **99.9% uptime** during 48-hour stress testing via automatic WiFi connection and sensor validation.
- Developed a responsive dashboard with historical trends and downloadable PDF reports.

CyberGuardian — Frontend Security Dashboard

Technologies: HTML, CSS, JavaScript

- Implemented a modular frontend interface visualizing fraud alerts and vulnerability indicators.
- Improved UI responsiveness and clarity through structured layouts and real-time alert feedback.

TECHNICAL SKILLS

Programming Languages C, C++, Python

AI / ML LLM APIs, Prompt Engineering, Hugging Face Transformers, Model Evaluation

Frameworks Streamlit, REST APIs, ThingSpeak,Arduino IDE, Keil IDE

Developer Tools Git, GitHub, VS Code

Coursework DSA, OOPS(C++), Design & Analysis of Algorithms, Software Engineering, Web Development, IoT,Probability and Statistics,Basics of Electronics Engineering ,Discrete Mathematics

ACHIEVEMENTS

- Smart Delhi Ideathon 2025 — **Top 150** teams out of 1000+ participants.
- Smart India Hackathon — Among **top 75** internal teams of 300+ entries.
- Build With India Hackathon — **Top 200** teams nationwide from 15,000+ participants.
- XYNOVA Ideathon — **Top 100** teams, IGDTUW.
- HackHatch Hackathon —Semi Finalist, **Top 100 teams**, IIIT Delhi.
